

Position Title: Senior Product Classification Specialist

Position Description:

The Sr. Product Classification Specialist provides guidance as well as resolution of problems that affect a broad spectrum of export and/or import activity. This individual will be required to interpret U.S. export and import regulations and successfully apply that information to drawings and specifications to ensure products are correctly classified. This position has the responsibility for carrying out daily activities related to product classification. A high level of communication, time management, technical, and organizational skills are needed in the product classification process and are used on a daily basis for contacting various internal and external resources. This position reports directly to the Manager, Import Compliance, but will be expected to provide support and guidance to the Export Relationship Managers and individual business associates on product classification matters related to import and/or export activity.

This individual will operate with a significant amount of independence. This individual may also be required to develop electronic solutions to support the enterprise need for classification of RCI products. Decisions will have a direct impact on financial results.

Position Requirements:

This position requires a strong working knowledge of the Harmonized Tariff Schedule (HTS), International Traffic in Arms Regulations (ITAR - 22 CFR) and the Export Administration Regulations (EAR - 15 CFR); and the individual must possess the ability to translate those regulations into advice and subsequent actions pertaining to product classification matters. This position requires a general understanding of the Customs Regulations (19 CFR), Food & Drug Regulations (FDA - 21 CFR), Federal Communications Commission (FCC - 47 CFR), Alcohol, Tobacco Products and Firearms (ATF - 27 CFR) Regulations as they relate to import and/or export activity.

This position requires a technical background or the ability to interpret product drawings and technical specifications in order to apply the correct classification.

Engineering background is preferred.

US Citizenship or Permanent Resident (Green Card) is required

Qualifications:

Bachelor's degree in appropriate discipline, and four years of related experience, or, in the absence of a bachelor's degree, ten years of related experience.
